JADECARE (Joint Action on implementation of Digitally Enabled integrated person-centered CARE) intends to reinforce the capacity of health authorities to successfully address important aspects of health system transformation, in particular the transition to digitally-enabled, integrated, person-centred care.

JADECARE is focusing on the transfer and adoption of four original Good Practices (oGPs) to 23 “Next Adopters” in 15 European countries, taking local context, maturity of integrated care, legal frameworks and culture into account.

The project lasts from October 1st, 2020 until September 30th, 2023.

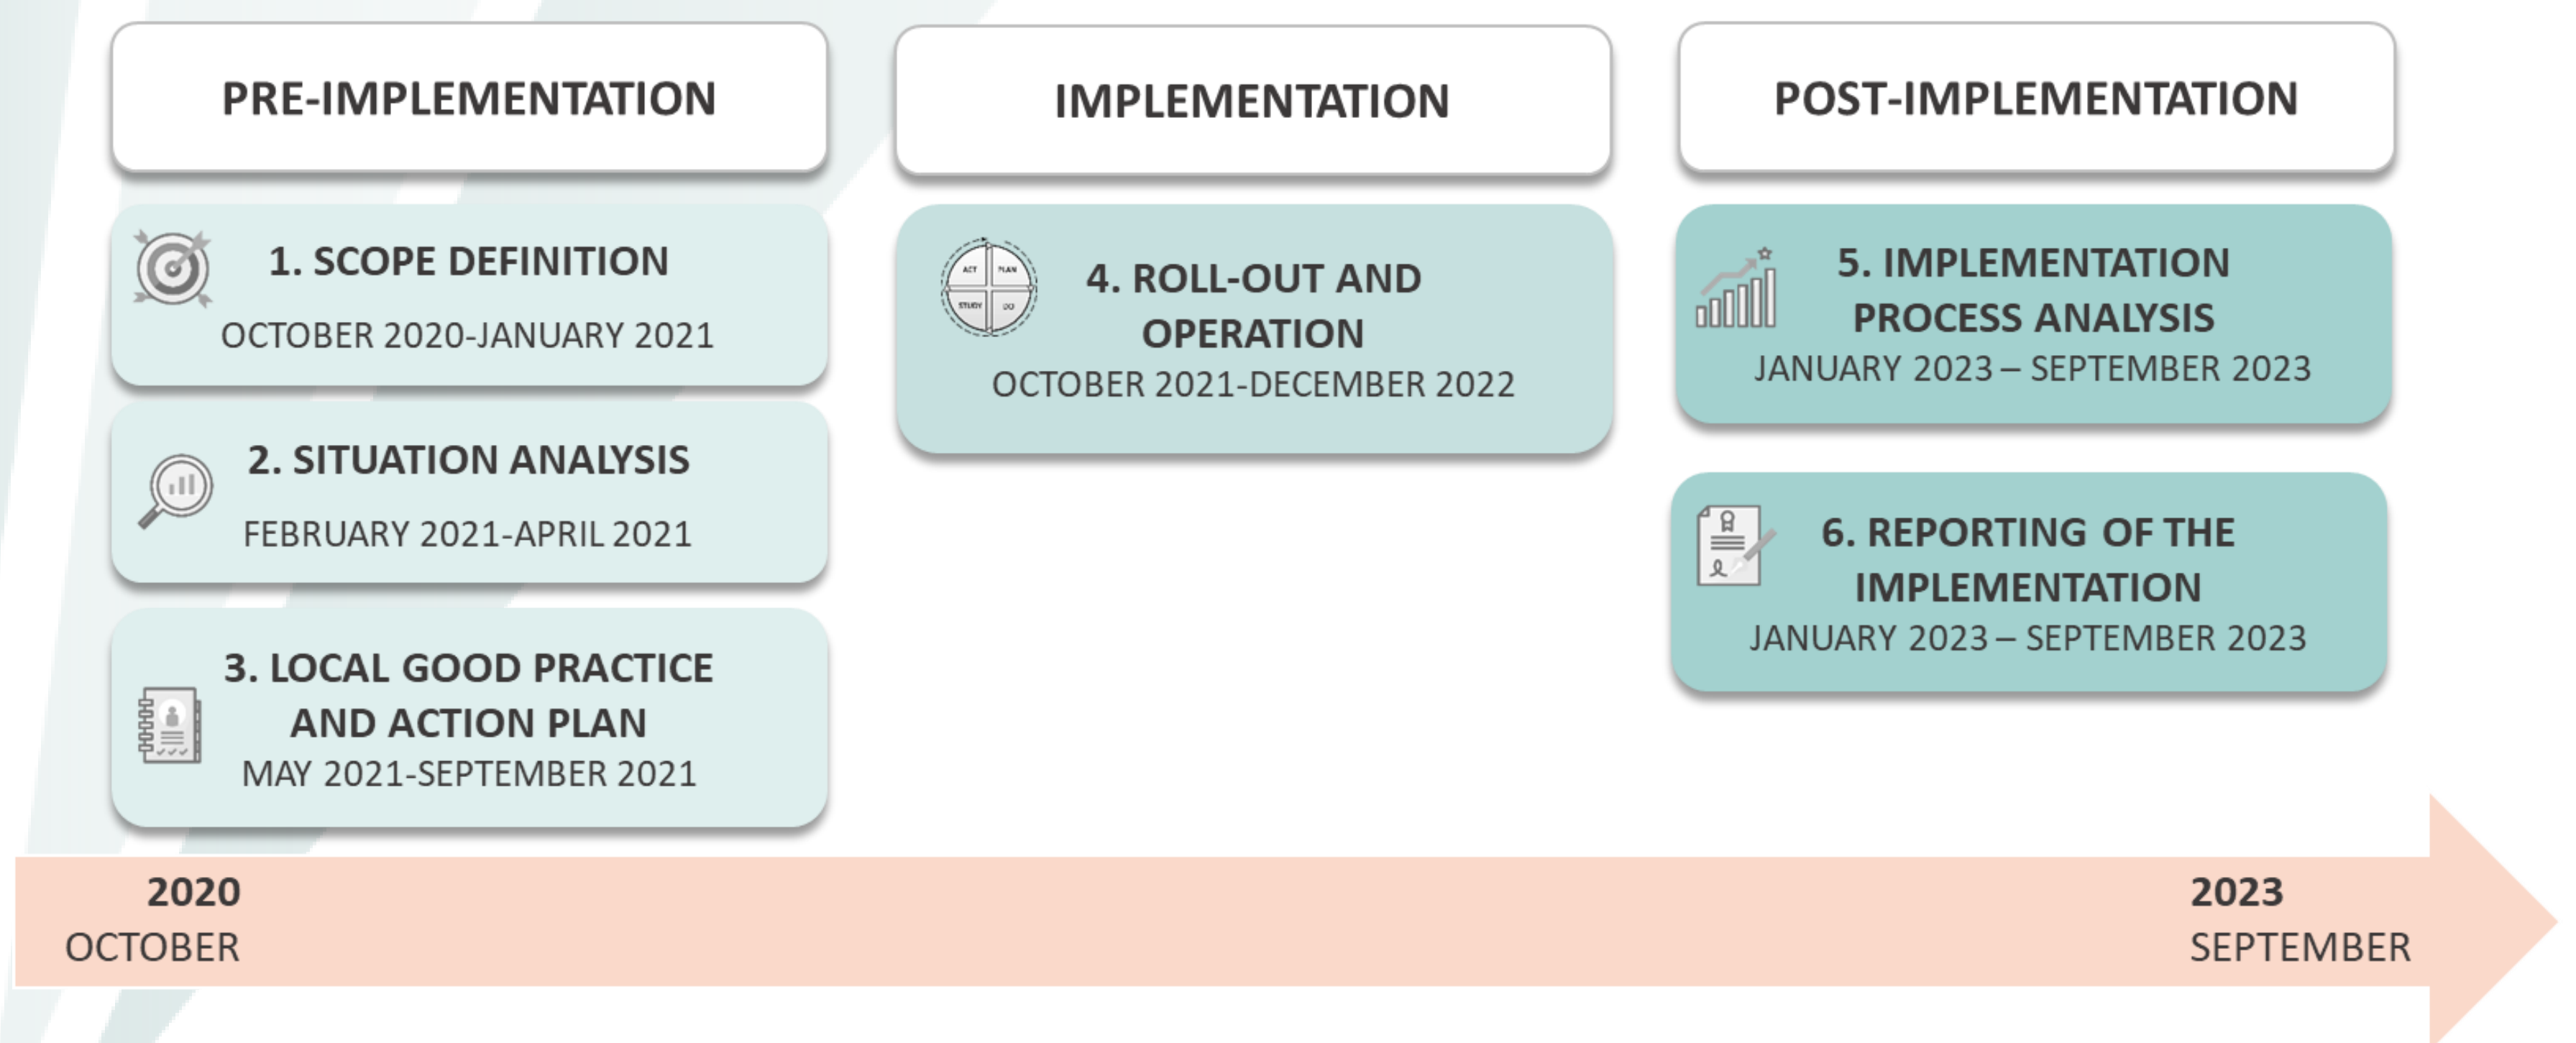

The selected four oGPs cover integrated care, chronic conditions, multimorbidity, frailty and complex needs, self-care, prevention and population health, disease and case management:

- Basque Health Strategy in Ageing and Chronicity: Integrated Care (Basque Country, Spain)
- Catalan Open Innovation HUB on ICT-supported Integrated Care Services for Chronic patients (Catalonia, Spain)
- The OptiMedis Model-Population-based Integrated Care (Hamburg, Germany)
- Digital Roadmap towards an Integrated Health Care Sector (South Denmark Region, Denmark)

IMPLEMENTATION STRATEGY

The transfer of oGPs will focus on the situation and preparation of the local environments of the adopting participants for the implementation. A three-step implementation strategy will be used for oGP transfer.

EXPECTED RESULTS

JADECARE will improve collaboration and trust among participants, support knowledge transfer and learning, generate evidence on integrated care, and ensure the sustainability of policies at local, regional and national levels, producing benefits beyond JADECARE’s timeframe.

The long-term effect of JADECARE impacting patients, carers, health professionals/authorities and general population is supported by involving stakeholders in governance bodies providing political commitment to integrated care.
